Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1724

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rieber (U.S. Patent No. 5,595,667) in view of Hirs (U.S. Patent No. 4,048,068). Rieber discloses filtering a water based fluid (col. 2, line 2; and col. 4, line 58) through a filter material comprising crumb rubber (col. 5, line 26; and col. 7, lines 28, 30, 43 and 60) obtained from tires (col. 4, line 39), which crumb rubber has the recited particle size (see col. 3, lines 6-17). Accordingly, this primary reference discloses the claimed invention with the exception of the recited downflow filter structure, and the additional filtration materials (claims 6-14, 18 and 19). Hirs discloses a downflow filter, and further teaches utilizing plural filtration materials including sand (col. 4, lines 51 and 67) and anthracite (col. 4, lines 45, 57 and 66). It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the filtration system of Rieber with the downflow filter structure of Hirs, in order to facilitate contact between the filtration material (i.e. crumb rubber) and liquid undergoing treatment in this primary reference system. Also, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the thus modified primary reference system with additional filtration layers of sand and/or anthracite, as further suggested by Hirs, in order to increase the filtration capability of this modified primary reference system.

Applicant's arguments filed July 8, 2004 have been noted and carefully considered, but no longer appear to be relevant in view of the new grounds of rejection.
